

Master of Science in Nursing

Family Nurse Practitioner (FNP) Specialization

Provide Primary Care to Individuals and Families Across the Lifespan

If you're a Registered Nurse with a bachelor's degree in nursing, the Family Nurse Practitioner (FNP) program may be right for you. In the program, you'll learn the skills to manage the primary healthcare needs of families and individuals as you collaborate with a team to provide safe, effective, and coordinated care.

As a member of the team, you will:

- Use evidence-based services and therapies to provide diagnoses and plan care for patients throughout their lifespan with primary healthcare needs, including furnishing and managing relevant medications.
- Work as an advocate for patients and their families and ensure that all are engaged and actively participating in a behavioral healthcare program.
- Expand your professional nursing skills to manage the acute and chronic health issues of those in need.

Upon graduation, you'll be eligible to sit for National Board Certification as a Family Nurse Practitioner.

Program Highlights:

- Online theory courses
- Program practicum is completed in faculty-approved clinical settings and online via telemedicine with preceptors
- Degree can be completed in as few as 18 months
- Courses are 4-12 weeks long
- Board certification review course for nurse practitioner specialties included
- Post-graduate nurse practitioner certificates available to students who already hold an MSN degree or a nursing doctoral degree

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

- **Implement appropriate theories, models, frameworks, and concepts** from nursing and non-nursing disciplines when designing interventions that influence healthcare outcomes for diverse populations in a variety of settings.
- **Collaborate with interdisciplinary teams** to evaluate fiscally appropriate healthcare delivery systems that integrate research and clinical expertise to provide evidence-based, patient-centered care.
- **Evaluate economic, policy, environmental, and social forces** that impact nursing practice and healthcare delivery and quality.
- **Participate in the analysis, implementation, and evaluation** of strategies for improving nursing practice through the implementation of health information systems and technologies.
- **Demonstrate a professional commitment** to creating an environment of lifelong learning for patients, families, communities, and other healthcare practitioners.
